Microsoft researchers have presented an impressive new  
[text-to-speech AI model, called Vall-E](#)  
which can listen to a voice for just a 3 seconds audio snippet,

acoustics – to say whatever you like.

Vall-E does a particularly good job of recreating the audio  
environment of the original sample. If the sample sounds like it  
was recorded over a telephone, so does the synthesis. It's pretty
